

We're making more of yew.

Thanks to a patented semisynthesis process, Indena today is making better use of the yew grown in its plantations. For this new, exclusive process synthesises anti-tumour molecules such as Paclitaxel from 10-Deacetylbaccatin, an intermediate obtained from the yew tree.

And this means a significant increase in the amount of taxanes produced from a given amount of biomass.

A new facility for semisynthesis is now in full production.
